

a b y z pdf

Equation of a straight line passing through intersection of two lines $a_1x^2 + b_1x + c_1 = 0$ and $a_2x^2 + b_2x + c_2 = 0$ is $a_1x^2 + b_1x + c_1 + K(a_2x^2 + b_2x + c_2) = 0$, where K is

SOME IMPORTANT MATHEMATICAL FORMULAE

Lecture Notes 1 36-705 Brief Review of Basic Probability I assume you already know basic probability. Chapters 1-3 are a review. I will assume you have read and understood Chapters 1-3.

COMPLEX NUMBERS AND QUADRATIC EQUATIONS 75 4. For any complex number $z = x + iy$, there exists a complex number 1 , i.e., $(1 + 0 i)$ such that $z \cdot 1 = z$.

COMPLEX NUMBERS AND QUADRATIC EQUATIONS

The Normal Distribution There will be many, many possible probability density functions over a continuous range of values. The Normal distribution describes a special class of

Lecture 6 : The Normal Distribution

1 8. One Function of Two Random Variables Given two random variables X and Y and a function $g(x,y)$, we form a new random variable Z as Given the joint p.d.f how does one obtain

8. One Function of Two Random Variables

Trigonometric Identities Pythagoras's theorem $\sin^2 + \cos^2 = 1$ (1) $1 + \cot^2 = \operatorname{cosec}^2$ (2) $\tan^2 + 1 = \sec^2$ (3) Note that (2) = (1)= \sin^2 and (3) = (1)= \cos^2 . Compound-angle formulae $\cos(A+ B) = \cos A \cos B - \sin A \sin B$ (4) $\cos(A - B) = \cos A \cos B + \sin A \sin B$ (5) $\sin(A+ B) = \sin A \cos B + \cos A \sin B$ (6) $\sin(A - B) = \sin A \cos B - \cos A \sin B$ (7) $\tan(A+ B) = \frac{\tan A + \tan B}{1 - \tan A \tan B}$ (8) $\tan(A - B) = \frac{\tan A - \tan B}{1 + \tan A \tan B}$ (9) $\cos^2 \dots$

Second Order Linear Differential Equations 12.1. Homogeneous Equations A differential equation is a relation involving variables x y y' . A solution is a function $f(x)$ such that the substitution $y = f(x)$ gives an identity. The differential equation is said to be linear if it is linear in the variables y y' . We have already seen (in section 6.4) how to solve first order linear ...
