

introduction to polymer science pdf

While intentionally created self-healing behavior has become an active research topic in materials science in recent years examples of pseudo-engineered systems have been available since the appearance of natural building materials such as adobe and mortar around 4â€“5000 years ago.

Effect of polymer architecture on the intrinsic self

A thermosetting polymer, resin, or plastic, often called a thermoset, is a polymer that is irreversibly hardened by curing from a soft solid or viscous liquid prepolymer or resin. Curing is induced by heat or suitable radiation and may be promoted by high pressure, or mixing with a catalyst.
